FOR BUSINESS OWNERS · EXPLAINED SIMPLY

What you're paying for in website maintenance

7 things a good plan covers, and one question to ask about each.

If it's not written down, it's not included.

Swipe for all 7 →

01

Updates

WordPress, plugins and theme, or your platform's apps. Done regularly, and tested on a copy of the site before they touch the real one.

ASK

"Do you test updates before they go live?"

02

Backups

Made every day, stored away from your server, and restored at least once to prove they work.

ASK

“When did you last restore one?”

03

Security

Old admin accounts removed. 2-step login for everyone with admin access. Unused plugins and apps deleted.

ASK

“Who has admin access right now?”

04

Monitoring

An alert goes to a person when the site goes down or starts showing errors. Before a customer tells you.

ASK

“How will you know the site is down at 3am?”

05

Renewals

Your domain, registered in your name. The padlock certificate now lasts 200 days at most, and about 100 from March 2027. Miss it, and visitors see a security warning.

ASK

“Is renewal automatic, and who gets the warning email?”

06

Small changes

A set number of hours each month for text, images and small fixes. Written down, so nobody argues later.

ASK

“How many hours are included, and what counts as “small”?”

07

Response time

“Checkout is broken” and “typo on the About page” are different jobs. Each needs a promised reply time.

ASK

“How fast do you reply when checkout breaks?”

RECAP

A good plan covers all 7.

1. Updates
2. Backups
3. Security
4. Monitoring
5. Renewals
6. Small changes
7. Response time

Save this for the next time you review your plan.
